

---

**Legend for Mac user and the ADD:**

**DEATH: virus, FALLING: crashes, SPEED: RAM, CUSTOMIZE: available hardware**

**This is Mac, it will never fall on it's side. Nobody dies on a Mac, you always have steady speed and it does not let you customize so you don't ruin it. Anyone can drive a Mac!**

**This is a PC, infact, it's an example of a PC because there are unlimited choices. It's hard to drive, but if you learn how to do it, you'll easily reach 150mph in a few seconds, many people die in them because it's hard to handle, you can customize it anyway you like, only people capable of driving transmission at fastass speeds with nothing to protect you from falling manage to see it's full potential, the rest die out by natural selection or quit and buy Macs.**
